Philip Agboola

Summary of Working Experience

Clinical data management professional with over 10 years of experience in clinical data management in multiple pharmaceutical and biotech organizations. Experienced in using major database management tools and processes, in various therapeutic areas. Performed Data validation and verification, CRF Review and Tracking, Experience with managing studies from study start up, conduct to database lock (eCRF design, data validation specifications, UAT testing, discrepancy management, data cleaning activities, SAE reconciliation and External vendor data reconciliation). Review of Ad-Hoc Data Listings, Work on Phases I, II, and III clinical trial, Worked in the following therapeutic areas: Cardiovascular, Respiratory, Infectious Disease (Hepatitis C) Central Nervous System (CNS).

Professional History and Experience

Regeneron Pharmaceuticals INC NJ OCT 2019 – Present

Senior Clinical Data Manager

- Serves as primary DM contact for assigned studies, including representation on project teams and working with CROs performing data management tasks for assigned study.
- Coordinates, leads and performs clinical data management activities for assigned studies in accordance with Regeneron's SOPs and policies and practices including, not limited to:
    - Monitors data clean-up process performed by CROs from study start-up through data archiving.
    - Provides data for analysis.
    - Coordinates activities including medical coding; data validation checks and database snapshot.
- Prepares and distributes project status reports to project team and management.
- Functions as DM team leader responsible for ensuring databases are validated and ready for transfer and/or analyses in accordance with Regeneron SOPs.
- Creates and maintains project documentation, including, but not limited to, Data Management Manual, CRF Completion Guidelines and validation specifications, and work instructions for assigned projects. Designs and modifies CRF.

- Responsible for the initiation and approval of the building, testing and validation of clinical databases, subsequent changes in clinical databases and data validation activities.
- Contributes to upkeep Regeneron DM outsourcing strategies and long-term relationships with outsourcing partners with objective of ensuring data quality and efficiencies through data and process standardization.

Works with study team and coordinates all data management functions. Manages coordination of CRO data manager and project team to ensure that tasks are performed according to policies and procedures.

Progenics Pharmaceuticals NY Aug 2016 -OCT 2019

Senior Clinical Data Manager

- Accountable for the overall DM strategy and implementation for high profile programs, as well as the management and mentorship of DM staff. As well as providing resource strategies internally and externally for outsourced activities.
- Provides operational leadership and takes full accountability of the direction, design, planning, execution, collection and handling of all clinical data to the highest quality standards.
- Write and review data management plans
- Coordinates and participates in the review of clinical data, analysis tables/listings/figures and patient profiles for data consistency and accuracy. This will include reviewing and resolving all discrepancies.
- Perform database user acceptance testing
- Develop and validate system edit checks
- Reconcile third party data e.g., safety labs, ECGs with clinical database
- Represent Data Management during study team meetings
- Developed Data Review Guidelines
- Elevated standards of quality through establishment of effective plans.
- Coordinated weekly meetings with DM team as well as bi weekly meetings with Clinical/CRO team

Covance Inc. NJ Sep 2014 – Aug 2016

Lead Clinical Data Manager

- Review clinical trial data in accordance with [Global] Data Management plans and applicable standardized data management processes (SOPs, Work instructions, etc.) to identify erroneous, missing, incomplete, or implausible data
- Run ancillary programs (e.g. diagnostics, special listings, reconciliation discrepancy listings) used to support the review of clinical trial data
- Generate, resolve and track queries to address problematic data identified during data review activities and apply proper modification/ correction to the database
- Apply quality control procedures and checks to ensure data quality standards (client and Covance) are achieved

- Interact with the dictionary coding maintenance group to ensure appropriate process set- up and application
- Assist with the reconciliation of central laboratory and/or third party vendor data (eCRF, eDiary, specialty laboratory, etc.)
- Assist with the aggregate review of clinical data by patient, site, and/or project to identify data trends (patient safety, compliance, etc.), and/or data inconsistencies that require further investigation
- Assist in the development and testing of data management system edit/ data validation checks (diagnostics) and special listings/ procedures used as tools for the data review and discrepancy management activities
- Support the training of project staff on project specific, global, standardized data management process
- Perform other duties as assigned by data management

Regeneron Pharmaceuticals NY **Jun-2012- Sep-2014**
Clinical Data Manager

· Worked as an extended team member within the device group.

· Reviewed and understood the study protocol thoroughly to develop the Data Management Plan, study specific eCRFs and Data Validation Specifications

· Involved in validating the database by creating raw data and conducted UAT testing. ·
Generated and reviewed data listings and queried for inconsistent data (I-Review, CDR) ·
Participated in study management team meetings and provided and managed minutes.

· Built effective relationships with Coding, Clinical, Safety, and Bio-statistical groups to work towards a common goal of creating a clean and robust database.

· Developed Data entry guidelines, Data management conventions for the DMP, electronic CRF completion guidelines, and data review guidelines.

· Performed SAE reconciliation on a monthly basis

· Performed various quality control activities
Maintained knowledge of SOPs, WIs, 21 CFR Part 11guidelines

Education:

Kean University Essex County community College
Bachelors of Art, Biology
Associate Degree General Science

Computer skills include: Word, Excel, PowerPoint, Access, Windows 2000, XP, and Professional, Microsoft outlook ETrials, EDC, Oracle Clinical 4.5, Veeva EDC and I Review.
