Associate Director, Clinical Data Management

Highlights

- Profound understanding of Data/Process Flows, CRF design and annotation, Database development and familiar with all aspects of Data Management processes.
- Over 15 years of clinical data management expertise, including professional history at Fortune 500 companies that includes J&J, Amgen, Genentech, and Gilead.
- Successfully lead the development and rollout of Medidata Rave Architect Loader Process (ALS) globally within Clinical Data Management (CDM). Reduced eCRF build time from 6 to 2 weeks.
- Successfully lead the development and rollout of CDM request tracking and global resourcing using the JIRA system. The new JIRA tracking system is now globally used by CDM in Genentech.
- Subject Matter Expert Medidata RAVE 5. x/iMedidata EDC applications and support PDIT as user administrator for CDM globally.
- Strong expertise throughout the clinical trial phase that includes analysis, design, development, testing, implementation, maintenance, production support and migration of the clinical database.
- Successfully lead the evaluation and selection of EDC Vendors including Veeva Vault CDMS and Randomization and Trial Supply Management (RTSM) systems at Quark.
- Successfully lead the EDC programming effort on Gilead Central Glib Standard database.
- Solid experience in implementation of Medidata modules, Coder, Architect, Configuration and Great exposure in Medidata Rave Architecture, and PRODUCTION support issues.
- Certified as Medidata Rave Study Builder.
- Effective in managing EDC technical solution development, performance, and quality.
- Experienced in subject migration using Amendment Manager in Medidata Rave.
- Leads or participates in the global and local functional/cross-functional implementation of best practices and process improvement initiatives.
- Author, designed, and maintenance of vital data management system documentation, including EDC Database Build Process, Study Build Manual, EDC Global Library, while adhering to SOPs.
- Effectively communicates ideas, project goals and status of work; presents to senior management.
- Developed and maintained working relationships with clinical project/data managers and a variety of external vendors.
- Possesses a positive attitude and builds effective working relationships with team members and external clients.
- Ability to work independently, strong problem solving skills, attention to detail, a willingness to take initiative, an ability to adapt to change, and strong organizational skills.
- Good knowledge of ICH, FDA, and GCP regulations and guidelines; strong well-rounded technical skill, EDC, RTSM, CODER, SDTM, and CDISC.

Work Experience

Nov 2019- Current **Quark Pharmaceutical,** Newark, CA. (Associate Director, CDM)

- Serve as a primary technical liaison and subject matter expert (SME) on all data capture components used for Quark studies internal/external users and partners.
- Provide database build projections to DM/PM Lead for study timeline.
- Review and comment on eCRFs, annotated eCRFs, edit checks documents and other clinical data management related documents.
- Use Agile development to program/configure eCRFs according to study team requirements using CDISC principles and standards, and to program edit checks, derivations, and in-system reports – reaching out to cross-functional team members and end users to develop requirements and solutions.
- Develop and contribute to Clinical Data Management SOPs and standard working documents meeting regulatory requirements throughout biometrics processes including IWRS/EDC, and data reporting.
- Oversee the EDC Administrator role to support operational deliverables under Study Set Up, Study Maintenance, Study Conduct and Study Close Out.
- Reviewed requests for proposals (RFP) and lead the vendor selection process.

- Identify, evaluate and select external business partners and technology vendors including EDC and Randomization and Trial Supply Management (RTSM) systems.
- Oversee the development, maintenance, and compliance of database builds and EDC standards in support of clinical studies including, but not limited to, Global Library, Edit Checks, CRF modules and Standard.
- Developed and maintained the database capabilities along with relevant functionality in the Database, Standards & Data Acquisition of Data Management. EDC expert providing guidance and best practices to DM, Clinical teams and other stakeholders.
- Lead, conduct of database and dictionary upgrades.
- Train team to conduct and document validation and testing, including Unit Testing and UAT of all system components
- Design, review, and maintain electronic data and integration specifications.
- Act as administrator for all data capture components, review database, edit check, integration, and report specifications and provide input.
- Ensure compliance with applicable regulatory requirements for data capture and storage, company SOPs and study specific procedures.
- Provide accurate and timely answers to technical questions from peers and clients.
- Review and provide feedback on the Clinical Data Management Plan.
- Effectively communicate with various levels of personnel and keep relevant parties informed.
- Participate in process development initiatives impacting Data Management and systems.
- Provide training to users on EDC system use.
- Review and query data according to study requirements.
- Provide mentorship to 1-3 programmers and Data Managers.

Work Experience

May 2016- Nov 2019 **Gilead Sciences,** Foster City, CA. (Sr. EDC Programmer)

- Acts as a lead EDC Programmer for one or more complex studies or projects, including mid-study changes, oversee primary and secondary EDC programming support.
- Coordinates study build activities across therapeutic areas, to ensure Gilead processes are being correctly followed.
- Ensures EDC programming work is completed in a consistent manner and validated according to departmental practices, and in accordance with standards.
- Executed pilot projects and provided technical and business process input on new and emerging technologies (like EDC 5.6.4, iMididata.)
- Authored EDC-related process documents, including Gilead Central Glib best practice guidance document.
- Manages eCRF and edit check design and ad-hoc programming for projects assigned.
- Maintain a broad perspective on programming issues, activities and deliverables.
- Participate in study team meetings as a representative of the EDC programming group.
- Conduct system training to internal and external users as needed.
- Team leader and go-to point person for all migrations, snapshots and related issues.
- Designed, developed and configured Systems and support for CDM Systems.
- Analyzed and recommended process improvements to produce high quality data.
- Demonstrates expertise in edit check programming within the EDC environment as well as knowledge of each of the following: Database extract, external edit check programming.
- Acted as Project owner for multiple projects to meet the timeline, resolve technical and business issue and maintain the FSP team.
- With little to no supervision, provides timely support to the study team on all programming matters according to the project plan and programming specifications. Shows effective collaboration with staff in Biostatistics, Clinical Data Management, and Clinical Programming.
- Effectively interacts with vendors to communicate expectations for study timelines and milestones.
- Independently identifies issues in the edit check, standard listing, eCRF, data export specifications from previous experience and knowledge.

2755 Tierra Way – Aromas, CA 95004 – email: ferozetech@gmail.com Cell: (408) 933-8945

- Mentor junior employees.

Work Experience

Nov 2007- **Genentech Inc.** South San Francisco, CA. (Sr. Clinical Programmer)
May 2016

- Lead the development of clinical database in Medidata Rave EDC systems.
- Stay current with advances, development, programming concepts, standards and processes.
- Maintain a broad perspective on programming issues, activities and deliverables.
- Provides technical coaching and mentoring for sub-function activities to Associate Clinical Programmers and/or Clinical Programmers assigned to a program.
- Develops and maintains working relationships within and outside of CDM at the program level for Clinical Programmer related tasks.
- Contributes or leads CDM/DDE working groups and initiatives.
- Drives or initiates the global and local CDM/DDE implementation of best practices and process improvement initiative.
- Coordinates and plans DDE activities to meet program-level deliverables and timelines.
- Review study team documents and conduct global review of systems deliverable to ensure adherence to standards.
- Lead and provide expertise in subject migration using the Amendment Manager in Medidata Rave.
- Coaches/mentors FSP and/or Clinical Programmers on CDM standards, work aids and guidelines and implements them consistently across studies within the program.
- Ensure FSP team member follows the standard/convention and meet the timeline for study.
- Contribute to the continuous improvement of CDM and the wider Development organization
- Provide technical and business process input on new and emerging technologies/vendors for clinical trial execution.
- Review and provide early strategic input into study configuration specification documents.
- Collect detailed specifications for the development of clinical databases.
- Contributes or leads local/global and cross-/ sub-functional working groups and initiatives.
- Serve as a resource for database development, programming concepts, standards and processes.

Aug 2006- **Amgen Inc.** South San Francisco, CA. (CDM Systems Programmer)
Nov 2007

- Develop, program, verify/validate, and maintain clinical trial databases and data entry screens using Oracle Clinical and Medidata RAVE applications.
- Define, document, develop/configure and support CDM systems (e.g., protocol builds, metadata configuration) through all study phases.
- Review study team documents (e.g., CRF, Protocol, Edit check Specification, DMP) to identify possible systems and standards issues.
- Conduct a global review of systems deliverables to ensure adherence to standards.
- Provide technical expertise and programming support for clinical trial projects and data management programming staff.
- Communicate project status and key project issues to data management team lead and department management.
- Provide support and technical guidance to contract staff, external partners and data sources.
- Lead the research and resolution of issues, consulting with others within or outside the department, to assure dissemination of complete and accurate information.
- Assist in developing new data management programming procedures and processes.
- Contribute to the continuous improvement of CDM and the wider Development organization.
- Developed and maintained working relationships with clinical project managers, bio-statisticians and a variety of vendors.
- Liaise with Development IS to ensure optimal system performance.
- Keep current with technological advances and coordinates activities with IT/IS personnel in an effort to maximize their potential use in managing data.
- Attend professional society meetings and stay current with technology best practices.

- Used SQL Scripts and PL/SQL programs to integrate data from various subsidiaries databases.
- Perform code review/program verification of peer programming.

Aug 1996- **Johnson & Johnson** (LifeScan Inc.) Milpitas, CA. (Clinical Research Tech III)
Aug 2006

- Performed Software validation tests on clinical database eData Management.
- Performed data transfer remotely using eData management.
- Design and construct electronic case report forms (eCRFs) based on annotated CRFs.
- Performed remote data entry at clinical sites using eData entry.
- Troubleshoot problems identified in eData Management and manage post-production change processes.
- Developed Clinical Forms to capture clinical data using Case Report Form (CRF).
- Frequent interaction with clinical data management team and clinical research associates (CRAs).
- Coordinate the review, printing and shipping of CRFs Support Standardization and Clinical Safety
- Develop, review and implement policies, SOPs and associated documents for CRF-related processes.
- Administrator and trainer for Documentum eRoom.
- Created and maintained clinical research web page.
- Coordinated and lead clinical study preparation to facilitate timely project completion.
- Written and executed protocols for internal and external studies.
- Upgraded and maintained QC program for all reference lab instrumentation.
- Documented NCR using Pilgrim Software.
- Developed, documented, a trained innovated system for downloading all glucose monitoring systems in Outcome Studies.
- Assisted Clinical Research Associates (CRAs) in collecting data to support 510K submissions.

Pertinent Training and Professional Coursework

- Medidata Rave 5.x, iMedidata, SAS Programming 1: Essentials, Oracle Clinical 4.x, JIRA System "Atlassian, eResearch eData Management, Livelink, Touchpoint.

Summary of Skills:

- Clinical software: Oracle Clinical 4.x, Metadata RAVE 5.x., Medrio, Veeva Vault CDMS.
- Database software: SQL*Plus, Microsoft Access, Brio Query.
- Microsoft Office: MS Project, PowerPoint, Excel, Word, and Visio.
- Adobe Software: Photoshop, Acrobat reader/writer, Premier, and Dreamweaver.
- Familiarity in all areas of database setup and programming for clinical studies.
- Familiar with data management processes through formal coursework and previous experience.
- Excellent written, oral, and interpersonal skills
- Self-motivated, willing to learn and demonstrates success at current job.

Professional Organization:

- Drug Information Association "DIA"
- Society for Clinical Data Management "SCDM"
- President's Honor List – San Jose City College
- Medidata Certified Professional

Education

- University of Phoenix, AZ – MBA Technology Management, 2006
- University of Phoenix, AZ – BS Information Technology (BSIT), 2003
