www.linkedin.com/pub/dean-gittleman/2/741/aa9

Senior level, collaborative, change catalyst with… Proven ability to deliver -- new products to market, business transformation, strategy and objectives. Recognized leadership and managerial expertise, and demonstrated ability to collaborate effectively on a global scale across Clinical Development organizations. Broad background in Drug and Medical Device Clinical Development, with deep experience in Clinical Data Management, Clinical Information Systems, and Clinical Operations functions, in both large and small Pharma/Biotech organizations, Medical Devices, and in CROs. Experienced across a range of therapeutic areas, including CNS, oncology, anti-infectives, endocrine, and urology. Increasingly called upon to speak at industry conferences on 21st-century approaches to quality in clinical development, including eSource, risk-based monitoring, and central monitoring.

Sampling of accomplishments

- Led Biometrics group (Clinical Data Management (CDM), Stats Programming, and Biostats) in delivering company's first NDA, Telaprevir, for Hepatitis C, Nov2010 {Vertex}
- Developed and implemented Clinical Operations processes that dramatically reduced need for source data verification (SDV), leveraging risk-based, remote, real-time monitoring, coupled with real-time data-entry {Target Health}
- Established Chennai-based Data Management Operations (operated by Accenture) {Eisai}
- Led effort to introduce and ramp up worldwide use of EDC {Eisai}
- Introduced first use of Electronic Data Capture technology in Lilly/ICOS clinical trial. {ICOS Corp.}
- Co-Lead on global (multi-site, cross-divisional) business implementation of *Oracle Clinical*™. {Pfizer, Inc.}
- Led Biometrics group in on-track performance towards 2nd simultaneous NDA, for Cystic Fibrosis {Vertex}
- Represented company during bid defenses, and at numerous conferences {Target HealthTarget Health Inc.}
- Delivered validated deployment of *ClinTrial*™ six weeks ahead of schedule. {ICOS Corp.}
- Managed divisional global deployment of Pfizer's standard patient data management tool, *Oracle Clinical*™. {Pfizer, Inc.}
- Initiated and supervised the implementation and **validation** of new clinical systems architecture. {NovoNordisk}
- Designed, developed, and implemented company's first Information Access System, for use by our clients in obtaining current information about their clinical studies under our care {Corning Besselaar}
- Part of small team that successfully defended two PMAs at Advisory Panel review, including the first sealed textile vascular graft approved in the US {Meadox Medicals, Inc.}

PROFESSIONAL EXPERIENCE

Consulting (Data Strategies)

Principal *Oct '18– Present*

Clinical development consulting engagements. Focused on 21st-century development methods, e.g., eSource (real-time data capture), Risk-based Monitoring, Value-added data management (aka Data Science).

Genentech/Roche

South San Francisco, CA – **Group Head, Non-Oncology CDM** *Mar '16 – Oct '18*

The CDM Group Leader directs a global team of 50-150 employees with multiple technical competencies across multiple Roche sites. The CDM Group Leaders direct reports will be primarily managers of managers.

The CDM Group Leader is responsible and accountable for all CDM activities in support of one or more Roche Therapeutic Areas/Disease Therapeutic Areas and/or business units. The CDM Group Leader ensures alignment between CDM priorities and partner objectives and requirements. The CDM Group Leader makes decisions related to processes, resourcing, and prioritization that impact the quality and timeliness of data availability for Roche clinical trials. These decisions can have a direct impact on Product Development's ability to reach internal goals and corporate goals. The CDM Group Leader will be challenged with leveraging the strengths of a diverse global team, building deep relationships with partner functions, educating partners on the role and value of CDM, and at the same time continually increasing the efficiency and effectiveness of their team.

- Establish and manage key partnerships with stakeholders in support of the business.
- Ensure that work practices within the group balance consistency with global practices with meeting the specific needs of the partners and studies supported by the group
- Oversee balancing and assignment of work across the teams in the group and coordinate transfer and/or sharing of tasks as needed
- Accountable for the global group budget and resources, ensuring design and implementation of resource models needed to adequately staff all projects.
- As part of the CDM Leadership Team, participate in the development of its global strategy and the execution of its mission and strategic priorities. In conjunction with senior Biometrics colleagues in Biostatistics and Statistical Programming the CDM Group Leader sets or adapts Biometrics strategy to best meet the needs of the Therapeutic Areas/Disease Therapeutic Areas and/or business units being supported.

Target Health Inc.

New York, NY – **Sr. Director of Operations** *Sep '11 – Mar '16*

- Member of the Senior Management Team for Succession Planning
- Provide strategic planning for the growth of Target Health
- Provide broad influence across drug development including vision, strategy, operations, flexible sourcing

Dean A. Gittleman Leading Innovative Biometrics and Clinical Development Operations, Enthusiastic Advocate of Data-Driven Strategies and Operations

10 Balsam Court, Lawrenceville, NJ 08648 · +1.609.436.0052 · dean.gittleman@gmail.com

www.linkedin.com/pub/dean-gittleman/2/741/aa9

- Assist in Business Development in drug, device, and biologic development within the expertise of Target Health, including identifying new clients and participation in business development meetings
- Attend and represent Target Health at scientific meetings
- Assure process optimization within Target Health.
- Work cross-functionally across entire development and corporate organizations (Regulatory Affairs, Clinical Research, Data Management, Biostatistics, IT, HR, Legal, Finance)
- Adopt latest, grounded, strategies and processes
- Provide opportunities for staff development
- Contribute to a positive work environment for attracting and retaining high performers

Vertex Pharmaceuticals, Inc.

Cambridge, MA – **Sr. Director, Biomedical Operations** *Jan '10 – Apr '11*

Build a global data delivery team, shape global infrastructure and capabilities, and play a key role in setting the tone for future growth in Vertex clinical development. Drive proactive statistical input into clinical strategies. Develop a global data delivery group that ensures robust access to the necessary data for organizational decision-making and various submissions. Develop and coach the heads of biometrics, data management, coding and programming. Responsible for process optimization, managing resource and capacity, and cross-functional integration. With staff in the US and in Europe, work in a global environment to build an optimal mix of expertise across the department.

Innovation & Leadership: Serve as the leader for a first in class data delivery group beginning with study design through to final data reporting and submissions. Set a vision for the group, inspiring creativity, productivity and a desire to build a premier group. Develop and manage resource models that enable Vertex to deliver on their pipeline in an efficient and innovative manner. Drive successful study designs and development plans that incorporate forward-thinking statistical strategies. Develop, empower, and support efficient data management, coding and programming methodologies. Work cross-functionally with senior management to optimize infrastructure, integrated processes and robust development plans. Instill and drive operational excellence, helping to bring Vertex into the forefront of development.

Data Delivery and Reporting Management: As a critical member of the leadership team, set and support business goals and translate those goals individual goals. Hire, train, and coach senior statistician, data management, coding and programming staff. Ensure that functions are appropriately trained and resourced to effectively drive Vertex programs. Support staff growth, development, creativity, and recognition. Help to further define organization needs, building infrastructure, processes and internal relationships to facilitate successful execution of clinical programs, able to leverage creativity and strengths within functions. Work with peers and external partners to secure external resources to supplement internal capabilities and optimize resource allocation; set expectations and align objectives to ensure excellence in trial and development plan design and execution.

Eisai Medical Research, Inc.

Ridgefield Park, NJ – **Sr. Dir, Global Operations Head, Data Management** *May '07 – Apr '09*

Dean A. Gittleman Leading Innovative Biometrics and Clinical Development Operations, Enthusiastic Advocate of Data-Driven Strategies and Operations

10 Balsam Court, Lawrenceville, NJ 08648 · +1.609.436.0052 · dean.gittleman@gmail.com

www.linkedin.com/pub/dean-gittleman/2/741/aa9

Provides strategic vision, leadership and direction for the growth of the Data Management function. Accountable for providing direction and oversight of global Data Management operations (including CRF and Database Design & Development, Application use and management, Data Entry, Dictionary Coding, SAE Reconciliation, Discrepancy Management and Standards). Plays leadership role in the development and execution of Data Management's short-term and long-term goals, ensures that they are based on sound clinical experience, and support Data Management's vision, and operating environment. Leads the Indian off-shoring operation, manages the US office and plays an important role in other regional offices. Contributes to Data Management vision and strategy for achieving that vision, and engages and motivates team to buy into vision and execute strategy. Effectively champions and leads change within Data Management and across the organization.

Directs all phases of U.S. Clinical Data Management (provides management support for multiple clinical projects, directs departmental therapeutic area activities, leads the development of the U.S. fiscal year budget for departmental projects support, staff resources, and overall expenditures). Anticipates staffing requirements and ensures appropriate technical and professional staffing levels and expertise. Provides coaching, mentoring and support to staff.

ICOS Corporation. *(ICOS purchased by Eli Lilly)*

Bothell, WA – **Sr. Dir., Clinical IS & CDM** (reports to CMO, Sr. VP, Development) *March '04 – April '07*

Provide strategic vision, leadership and direction for the use of information technology across all of Clinical Affairs (Biostatistics, Clinical Operations, Statistical Programming, Data Management, Clinical Research, Regulatory/CQA, Clinical Business Management). Collaborate effectively with partners in Lilly/ICOS joint venture. Provide strategic vision, leadership and direction for the growth of the Data Management and Clinical Information Systems Departments. Anticipate staffing requirements and ensure appropriate technical and professional staffing levels and expertise. Plan and manage all aspects of budget and staffing for the Clinical Information Systems and Data Management departments. Provide leadership across all of the Clinical Affairs organization for the implementation of a new clinical trial patient data management system. Provide coaching, mentoring and support to staff. Collaborate effectively with the multidisciplinary project development teams (including Discovery Research, Pre-Clinical Development, Regulatory Affairs, Quality Assurance, Business Development, and Marketing) and clinical teams. Attend staff meetings of the Senior VP (Chief Medical Officer), Development and contribute to the Clinical Affairs leadership team, on issues including strategy and management.

Pfizer, Inc.

New York, NY – Assoc. Dir., Global Data Operations (Phase IV unit) *November '96 – February 2004*

Manage PPG's worldwide deployment of Oracle Clinical™. Lead Clinical Data Operation's (CDO's) worldwide business process support for Oracle Clinical. Co-lead Pfizer's Business Track for Oracle Clinical project. Help to manage departmental transition from SAS-based clinical data management to relational database-based systems. Function as CDO's Business Transition Manager for the global corporate deployment of Oracle Clinical™. Help to establish strategies for the development of key internally developed systems to be used in conjunction with Oracle Clinical. Drive the selection and development of ad hoc reporting tools to be used in the new data management environment.

Innapharma

Upper Saddle River, NJ – Assoc. Dir., Clinical Information Systems *February '96 - November '96*

Establish direction and strategies for corporate clinical computing. Create an information architecture to provide broadest possible access to clinical data. Manage the design and development of Clinical & Regulatory database applications. Establish standards for transfer of electronic data from outside sources (e.g., central laboratories). Evaluate technologies that can improve productivity of clinical data capture processes (e.g., Remote Data Entry, Remote Study Monitoring). Provide direction for and ensure timely setup of clinical studies databases.

Novo Nordisk Pharmaceuticals, Inc.

Princeton, NJ - Manager, Clinical Data Management *November '94 - February '96*

Manage all aspects of data handling for data captured in support of clinical studies. Responsibilities include line management of Data Management, Data Entry, CRF Development staffs, management of the database software (e.g., Oracle), clinical data-management software (e.g., ClinTrial), and the Oracle-to-SAS interface, as well as the underlying hardware infrastructure. Work closely with colleagues at parent company (Denmark) as well as with other international affiliates to establish global data management strategies and priorities. Work closely with diverse central laboratories to ensure timely delivery of clean data in useful database format. Manage implementation of global, integrated database.

G.H. Besselaar Associates

PRINCETON, NJ - Clinical Systems Analyst *May '92 - November '94*

Manage the computing needs of the Clinical, Regulatory, and Medical Writing Departments. Responsible for developing and implementing novel and new technologies and database applications designed to streamline clinical operations and support near real-time client communications. This involved a great deal of database application design and development, including client/server and Lotus Notes applications in support of clinical and regulatory operations, both local and distributed (regional CRAs, networked clients, etc.).

Meadox Medicals, Inc.

OAKLAND, NJ - Project Leader, Scientific Information Systems *June '86 - May '92*

Establish Clinical Data Management and Clinical Computing functions for the company. Select, purchase, and implement the company's first clinical data management software package, and supervise the porting of existing clinical data from the finance group's HP-3000 (COBOL) machine to the new PC-based software. Implemented the company's first computer network (Novell), initially connecting PCs in the Clinical and Regulatory departments. This network served as the foundation for networking the entire company, and subsequently grew to connect 100+ PCs in several buildings, using fiber optics to link the buildings.

With this infrastructure in place, we were able to conduct multiple clinical studies much more efficiently, two of which led to PMA filings, both successful. Responsible for designing and implementing the clinical databases and database applications (e.g., tracking systems) that supported, initially, the Clinical and Regulatory departments. Responsibilities later expanded to cover the R&D, Engineering, and Manufacturing departments. Introduced the concept of Experimental Design to the company.

While not a statistician, I did represent the company's strongest in-house statistical expertise, and performed numerous statistical analyses, both independently and in conjunction with hired statisticians. Met with FDA to sort out statistical and data management issues regarding the conduct of our studies. I also worked closely with our European affiliates to ensure compatibility of our worldwide data management systems and practices.

Cooper BioMedical, Inc.

FREEHOLD, NJ - Programmer/Staff Scientist *January '83 - June '86*

Develop diagnostic chemistries to run on a new automated clinical analyzer. Wrote all of the software used by our research group for storing, analyzing, plotting, and reporting on the data generated by our R&D experimentation. This small suite of applications came to be used extensively by all R&D functions within the company and served as a major boost in R&D productivity. I also served as our group's primary science writer, a role in which I was called upon to present group findings to corporate staff.

Columbia College of Physicians & Surgeons

NEW YORK NY - Programmer/Staff Research Assistant *August '79 - January '83*

Conducted basic research in arteriosclerosis and atherogenesis. Worked on design of clinical protocols for trials conducted in gastro-enterology clinic. Served as liaison with federal and state regulatory agencies for establishing compliance with study protocols.

Assumed responsibilities for the day-to-day operations of our five research groups. In this role, I developed a first-hand appreciation of the skills required to work with a broad array of constituencies.

Served as our research group's computer guru as a result of serendipitous connection with the computer science professor who introduced me to UNIX and the "C" language.
